Cryptocurrency App

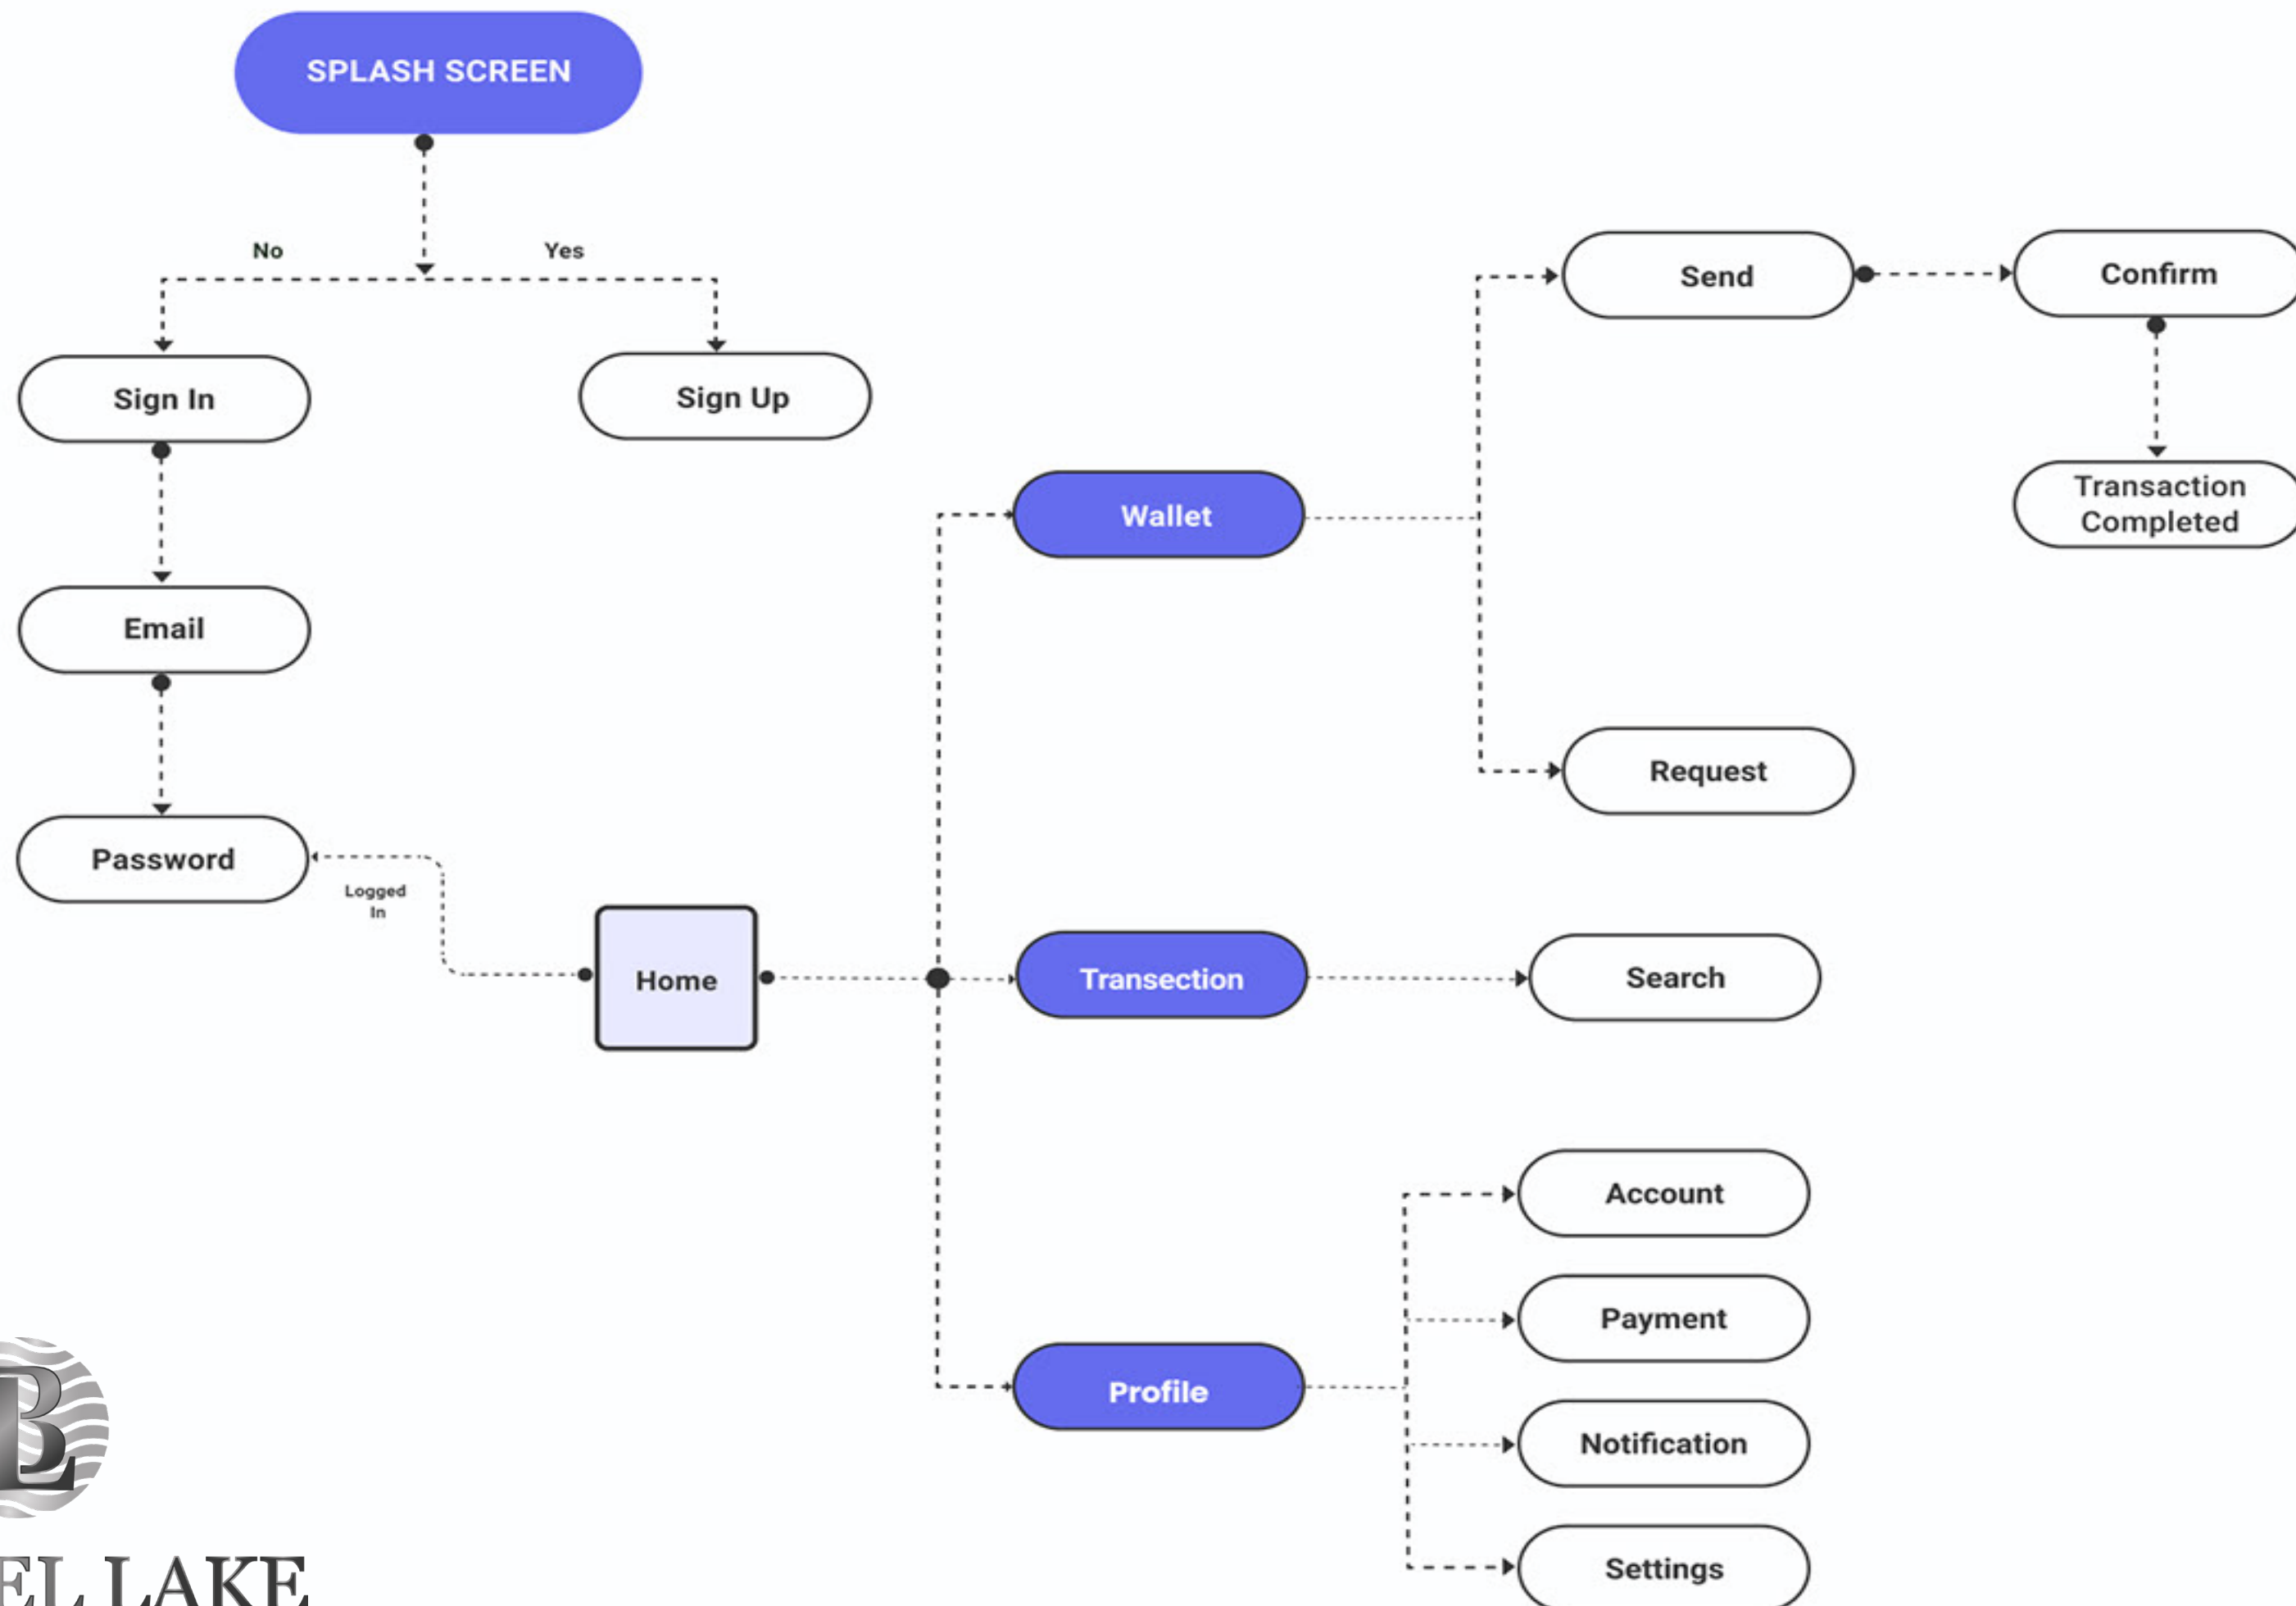

A cryptocurrency app is a mobile application to transact cryptocurrencies and store and manage them securely. The cryptocurrency app is generally of two types, a cryptocurrency wallet and an exchange. Here, we talk about the cryptocurrency wallet app.

Since cryptocurrencies do not exist in physical form, the cryptocurrency wallet only stores the cryptographic public & private keys. When you want to transact, you simply pass on the wallet address and get it done.

Brussel Lake Paragon offers cryptocurrency app development services to help you transact and manage multiple cryptocurrencies.

Work Flow

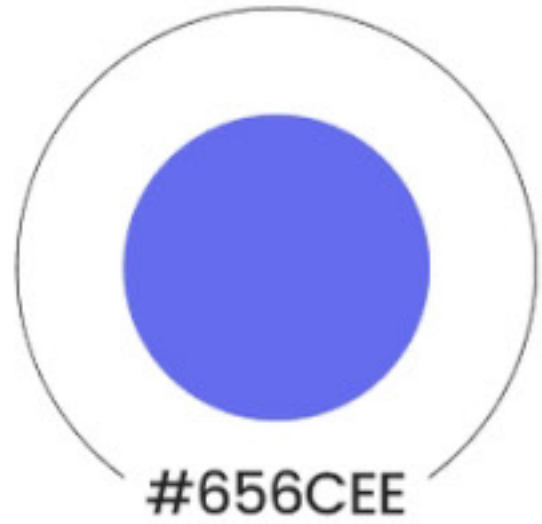

The cryptocurrency wallet app workflow depends on the business objectives of the customer. The wallet can either be a cold or a hot wallet. It can be used to only store the cryptocurrencies or for their transactions too. Once the goal is decided, the data is analyzed and the workflow is designed accordingly.

Wire Frame

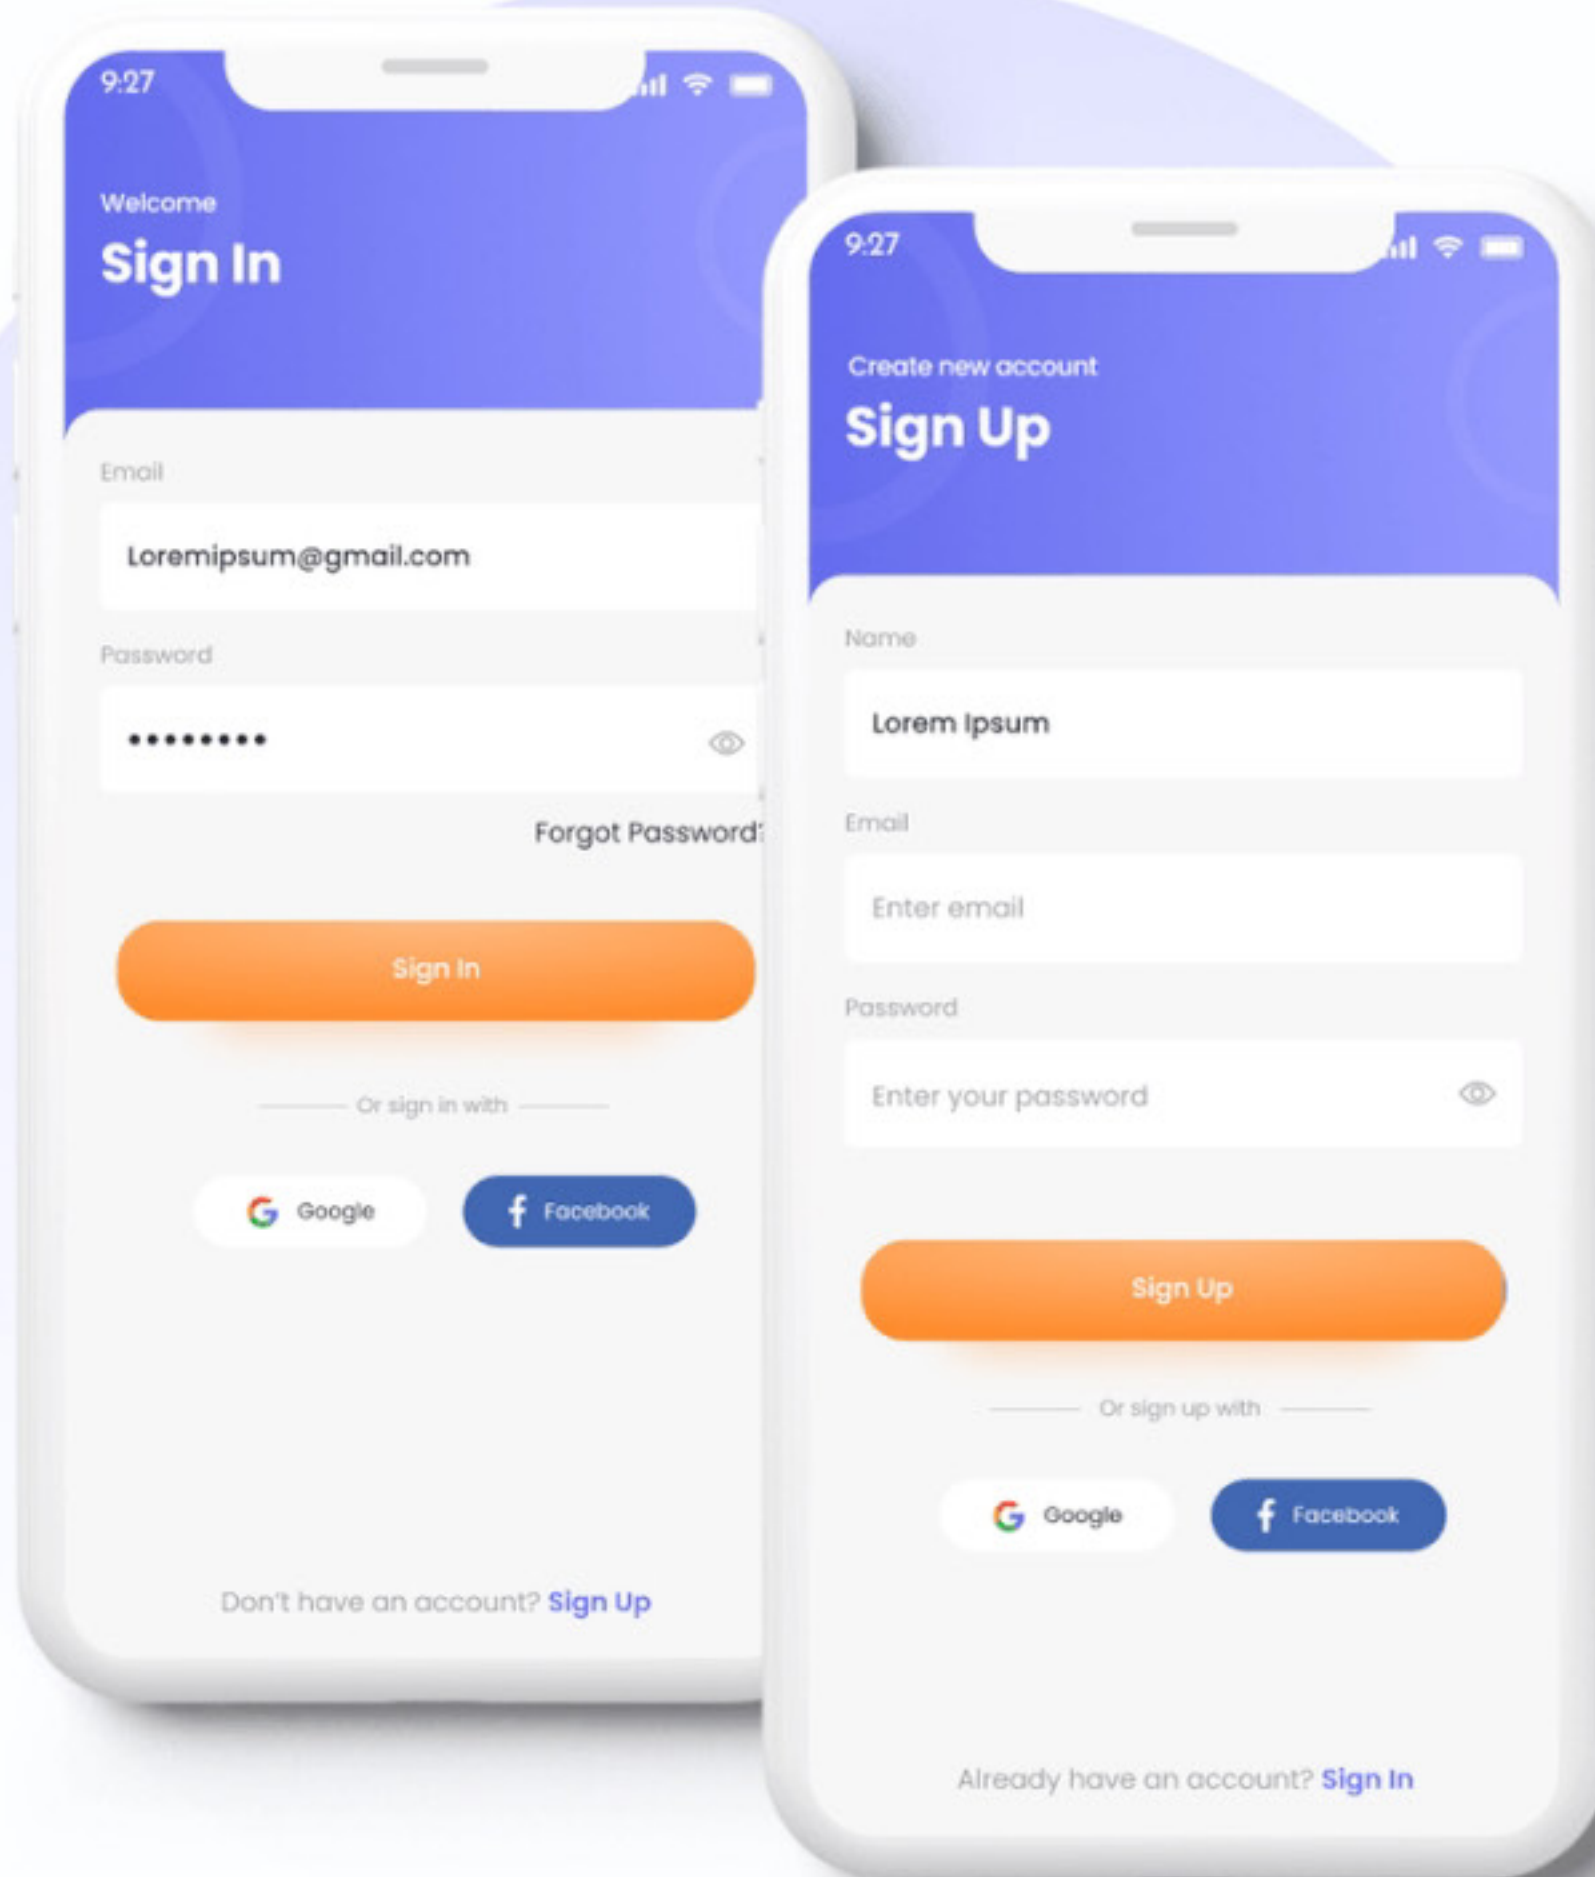

The workflow decides the cryptocurrency wallet wireframe. The pages of the cryptocurrency wallet mobile app have to be optimally designed for an easy user interface. Also, care has to be taken in the wireframe layout to have the security features neatly designed without any glitches.

UI design

The cryptocurrency app UI design is focused on user experience. The main option for users while selecting a cryptocurrency wallet is its level of security and the ease of transactions. The placing of elements, color, typography are so selected to aid easy use without any distractions or clutter.

Registration

A first-time user registers with their email id and sets up a new id and password.
