WORKFLOW

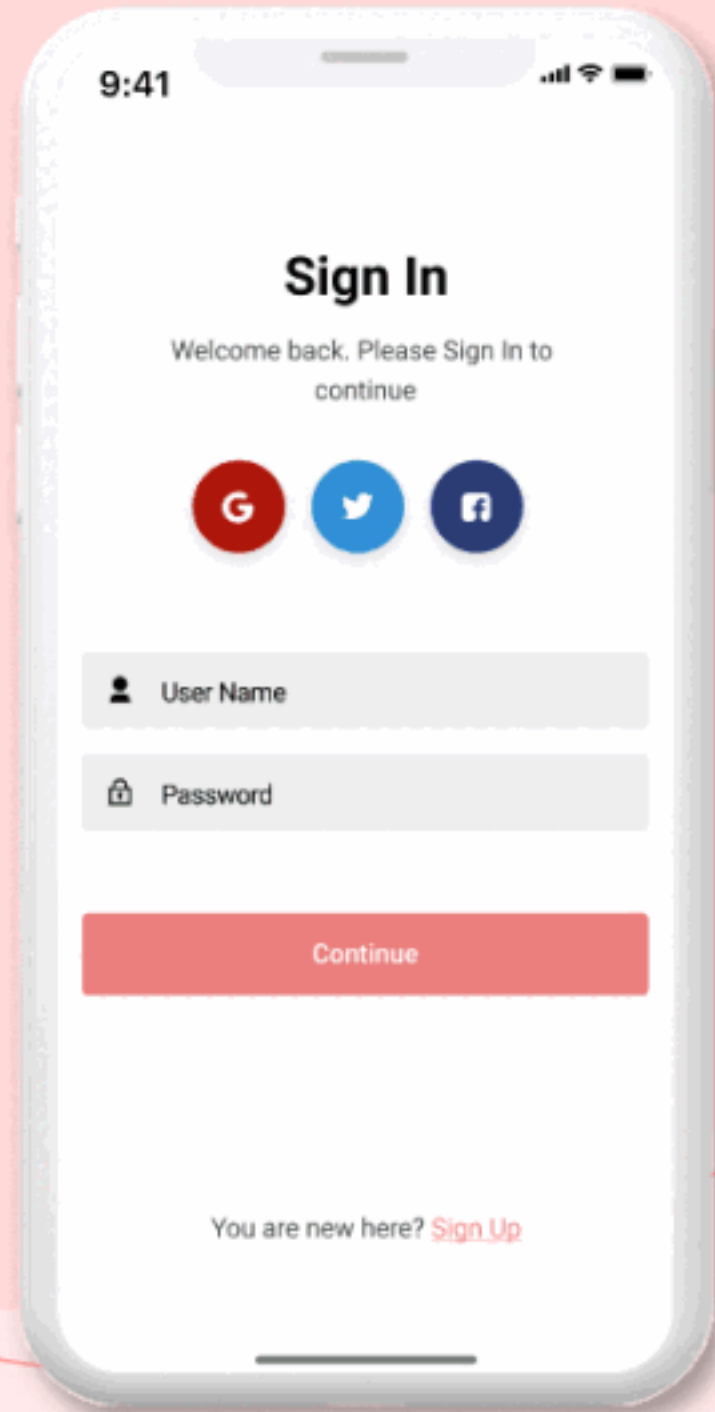

The e-commerce app workflow is designed after knowing the customer's current and future requirements.

WIREFRAME

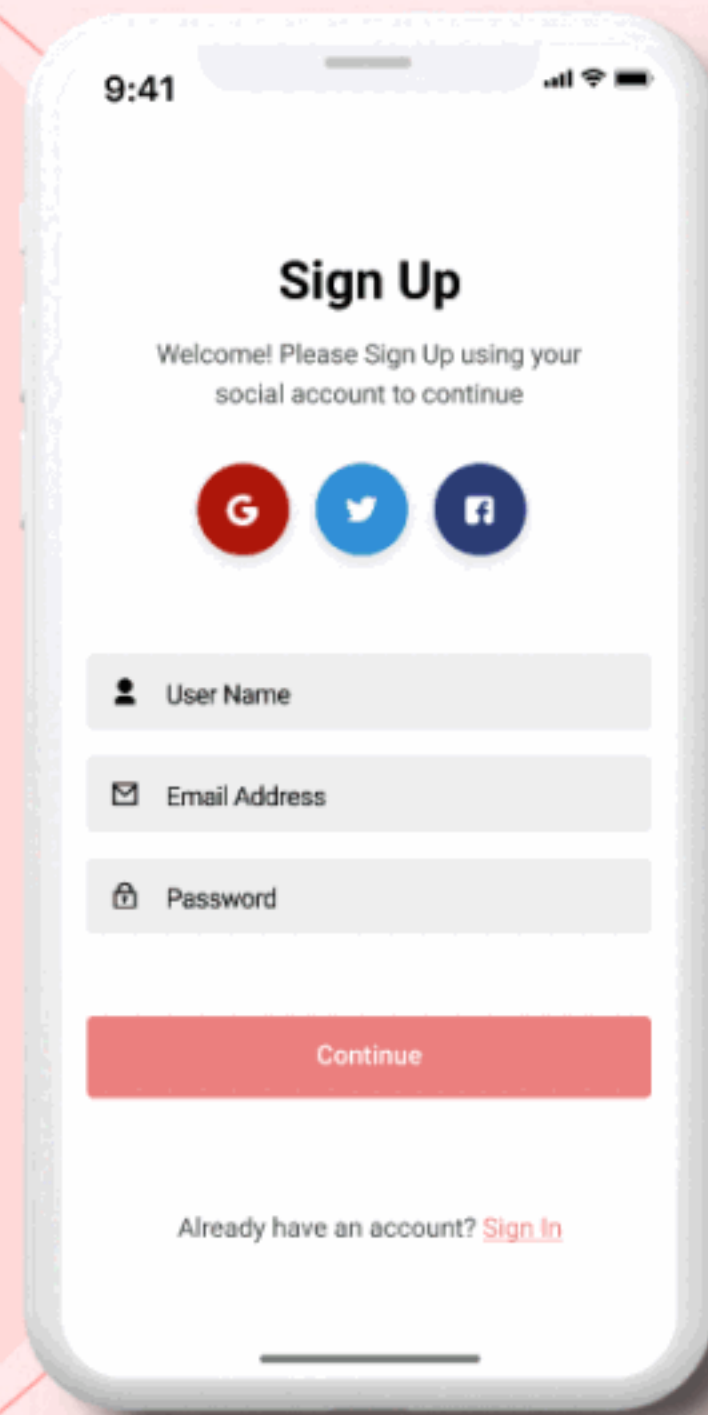

With a mobile device having a limited screen measurement than a desktop or laptop, it becomes necessary to plan the e-commerce app wireframe to be minimal and clutter-free yet offer an enriched interface to make the browsing experience user-friendly.

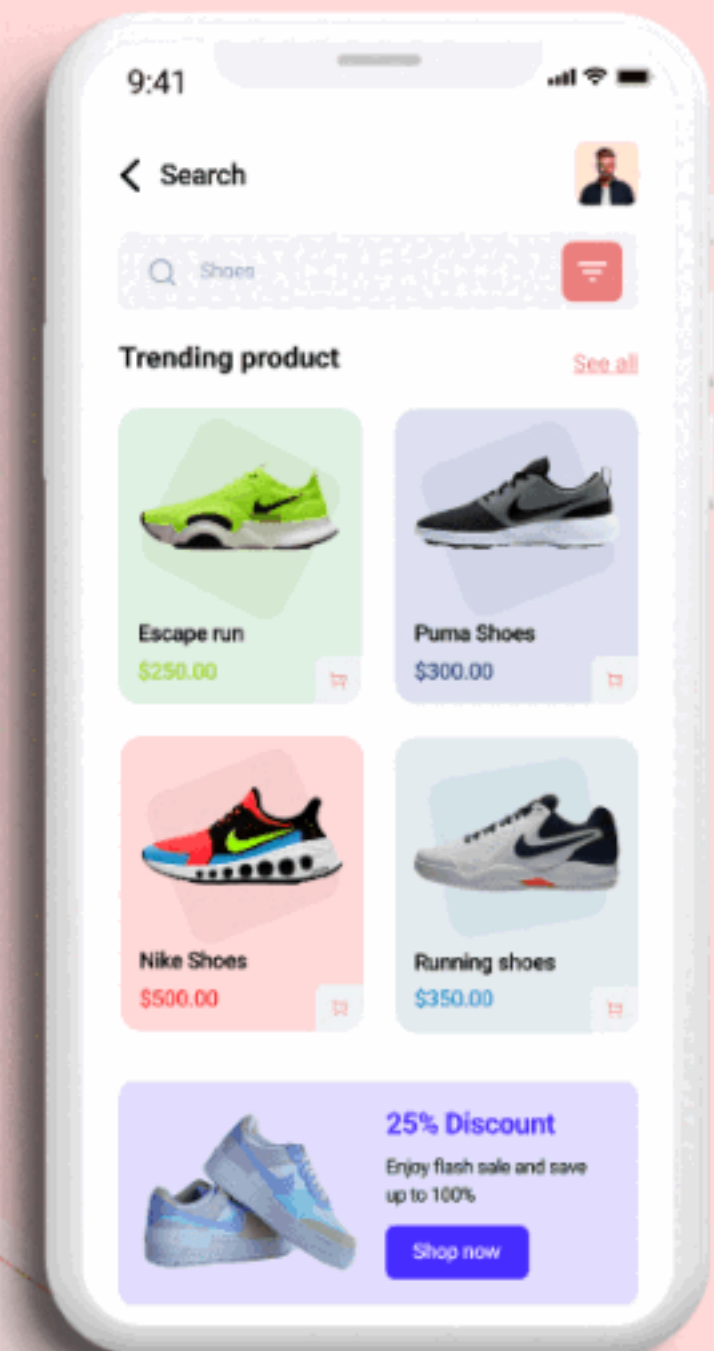

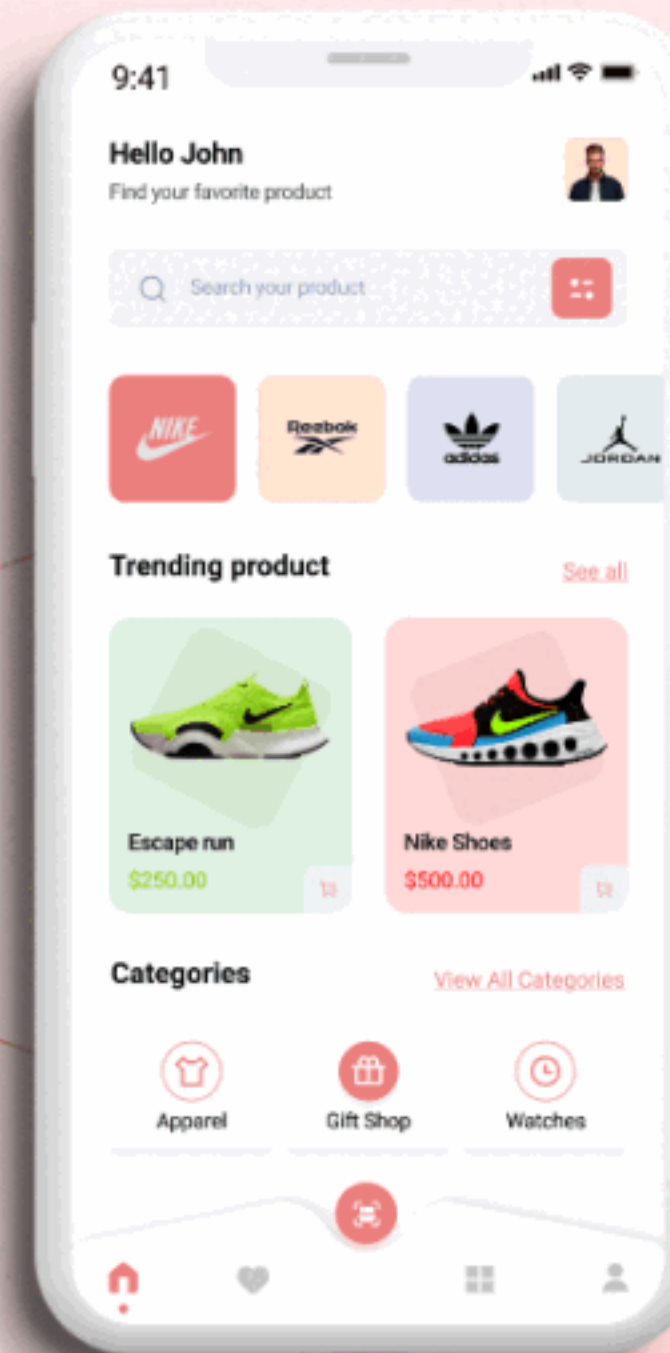

Search bar

The search bar has a drop-down suggestion box that helps users to search for the exact product or related products.

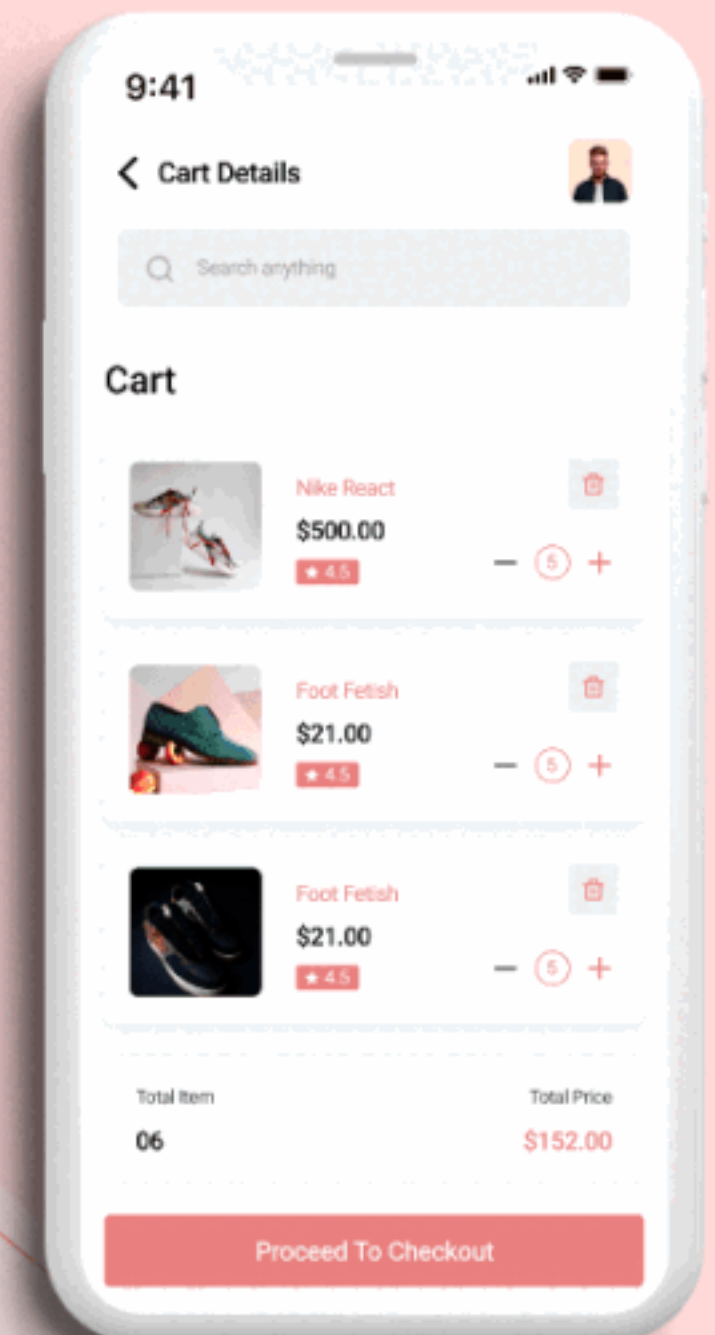

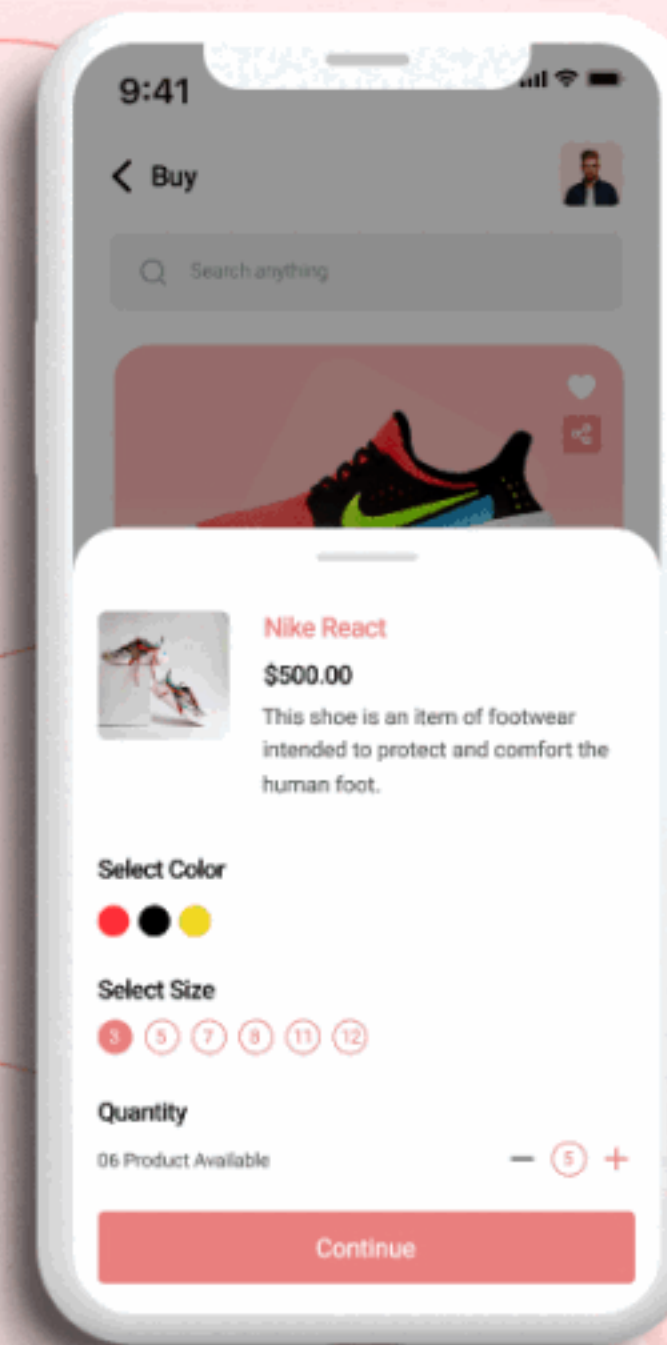

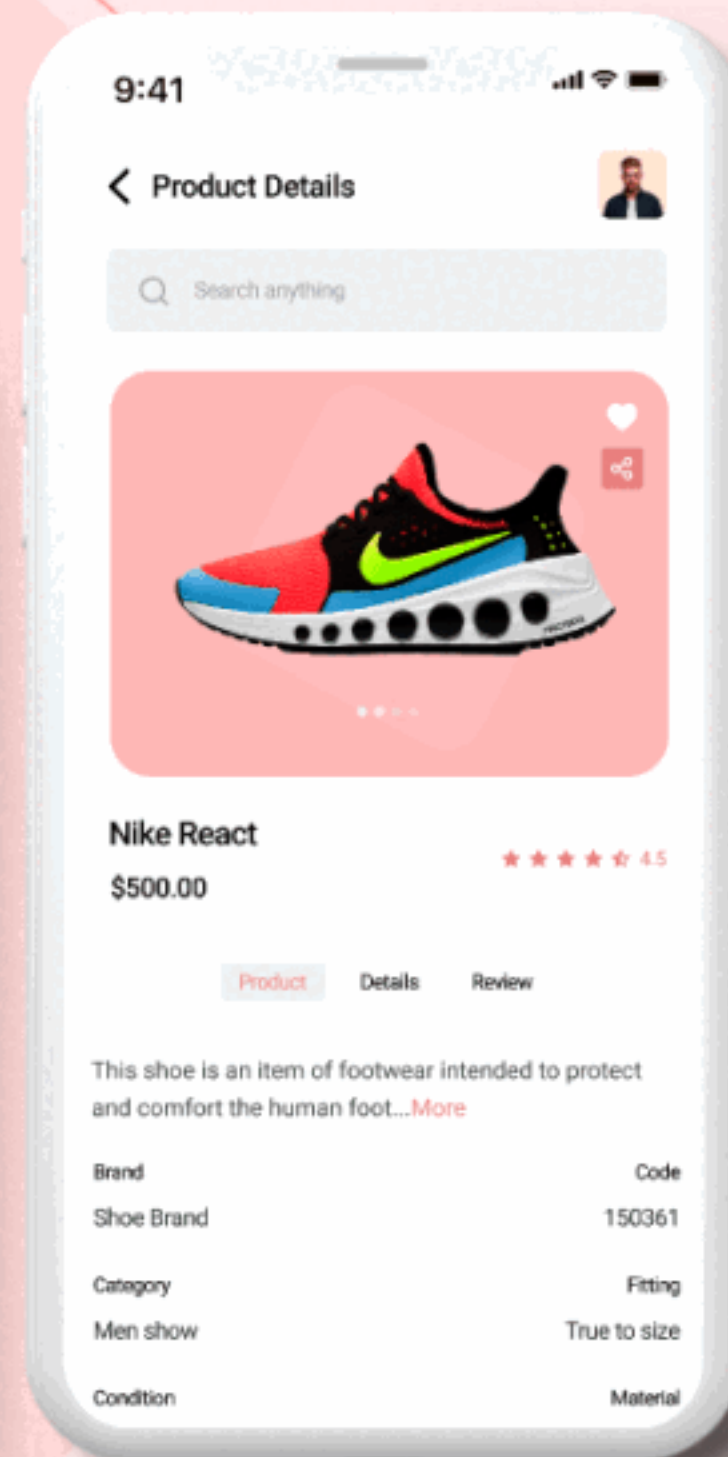

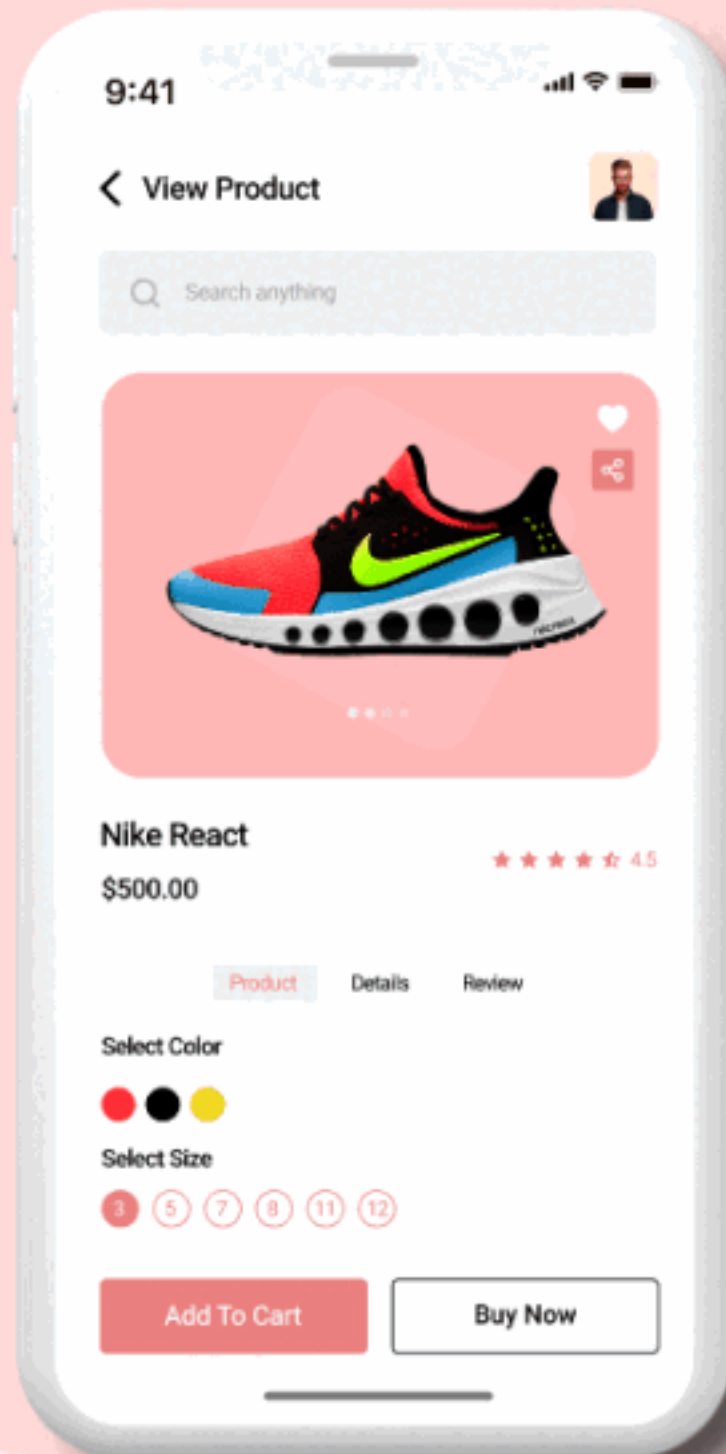

Customer login

The user signs in to the e-commerce mobile app with their email id or contact number or social media accounts.

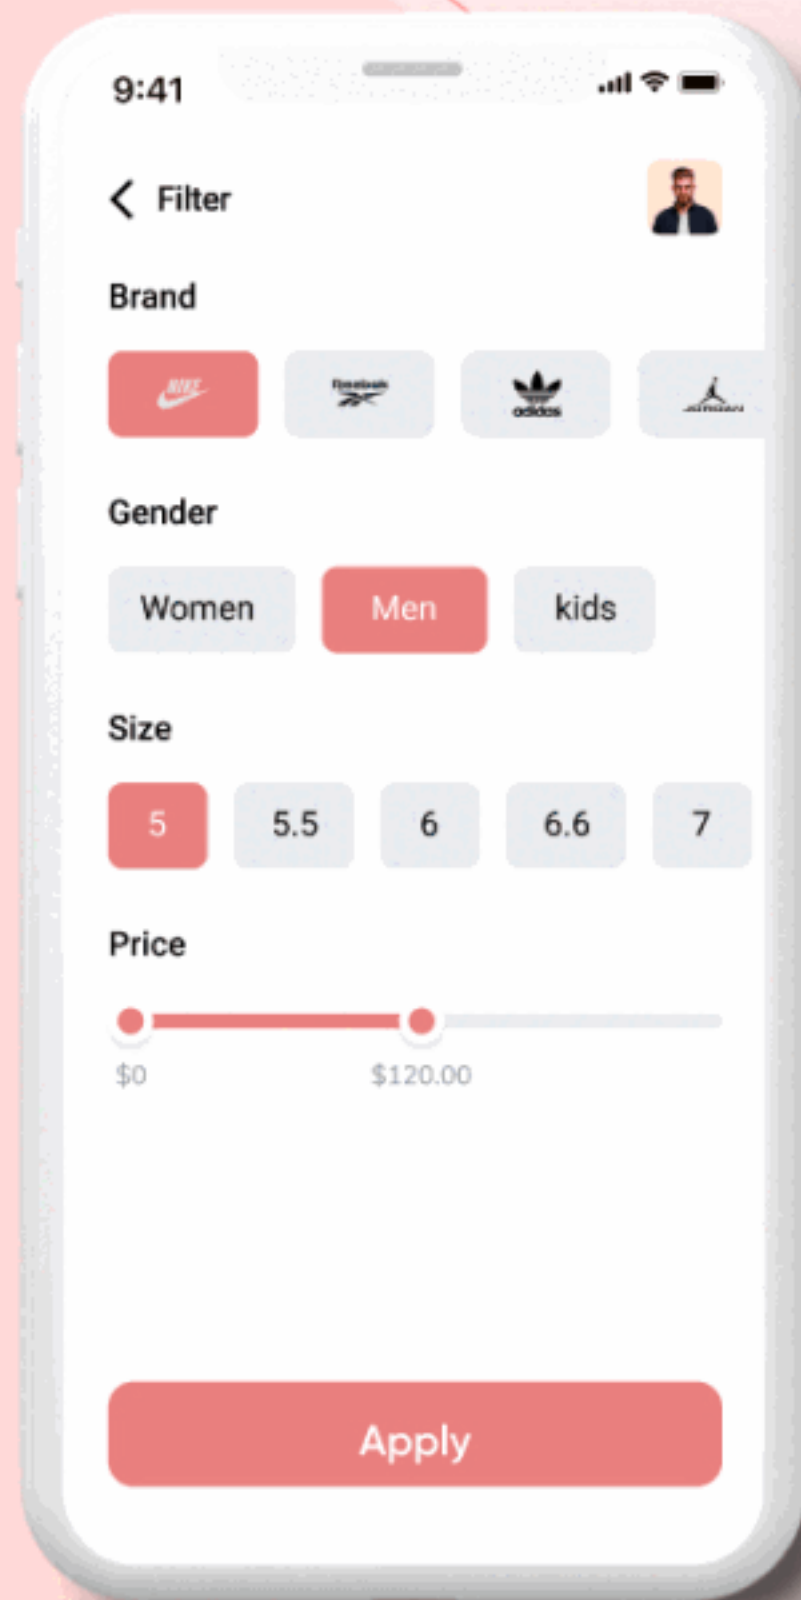

Product description

The product description page contains details of the product with images and videos, its price, consumer ratings & reviews for that product

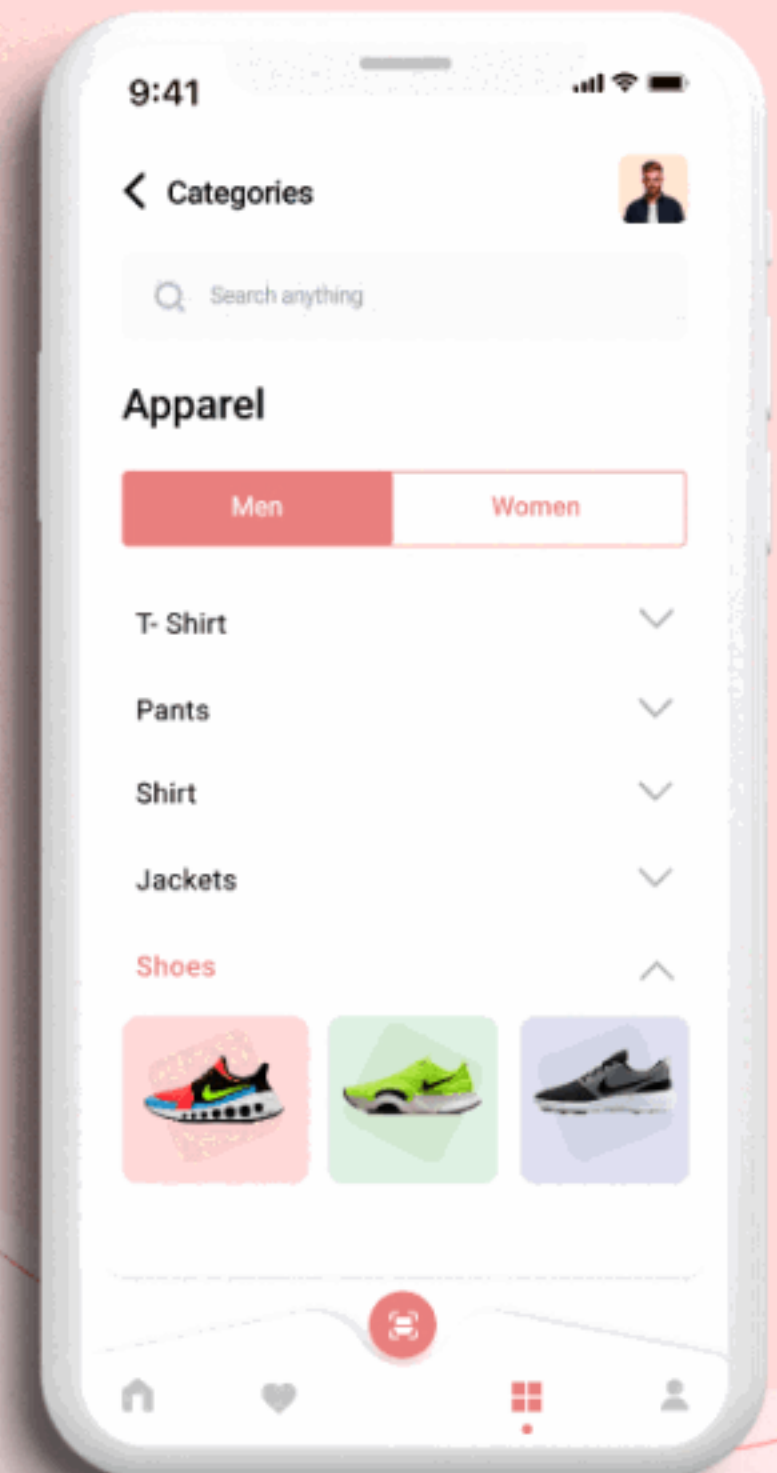

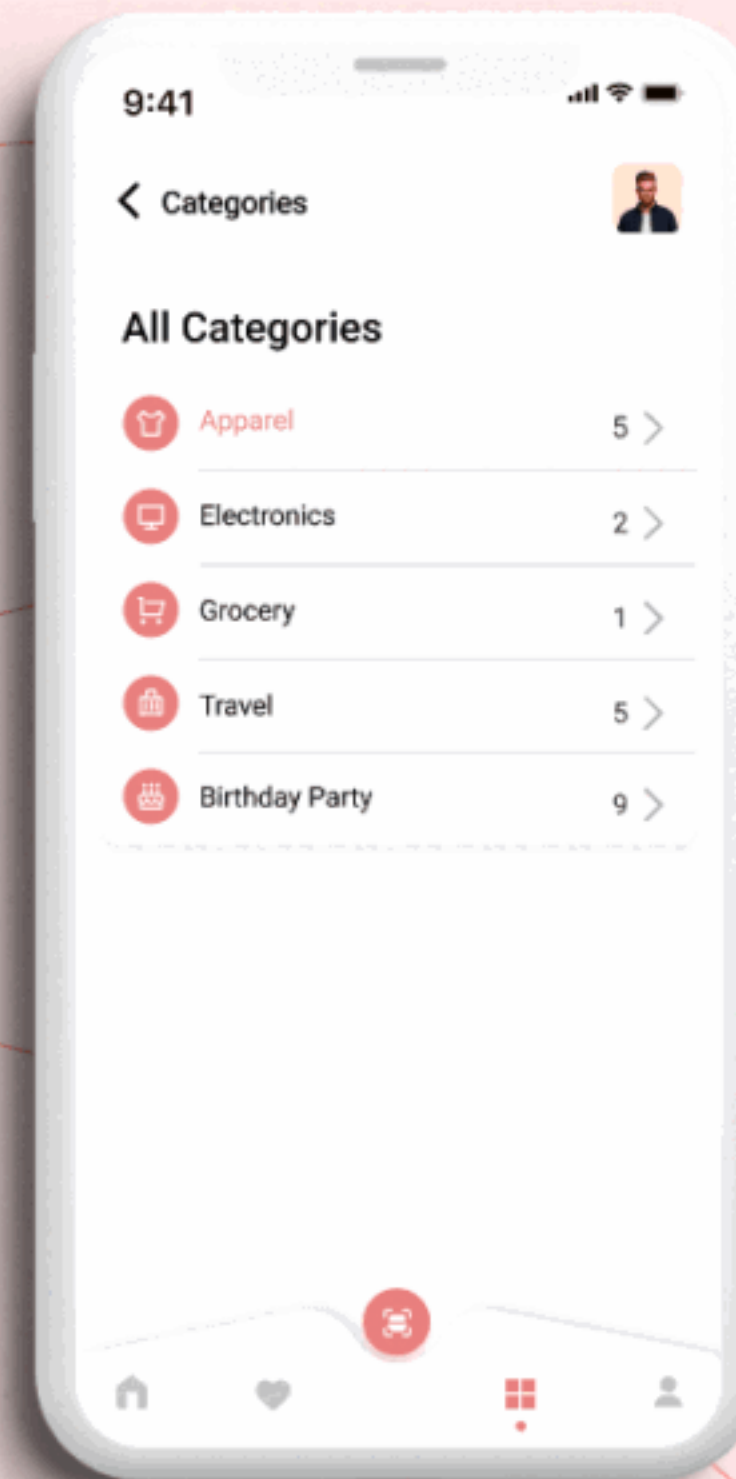

Shopping cart

The shopping cart contains the products added to the cart, their quantity, estimated time of delivery and the shipping address.

Product filters

The product filters help users to narrow down the search even further and see the products of their choice.

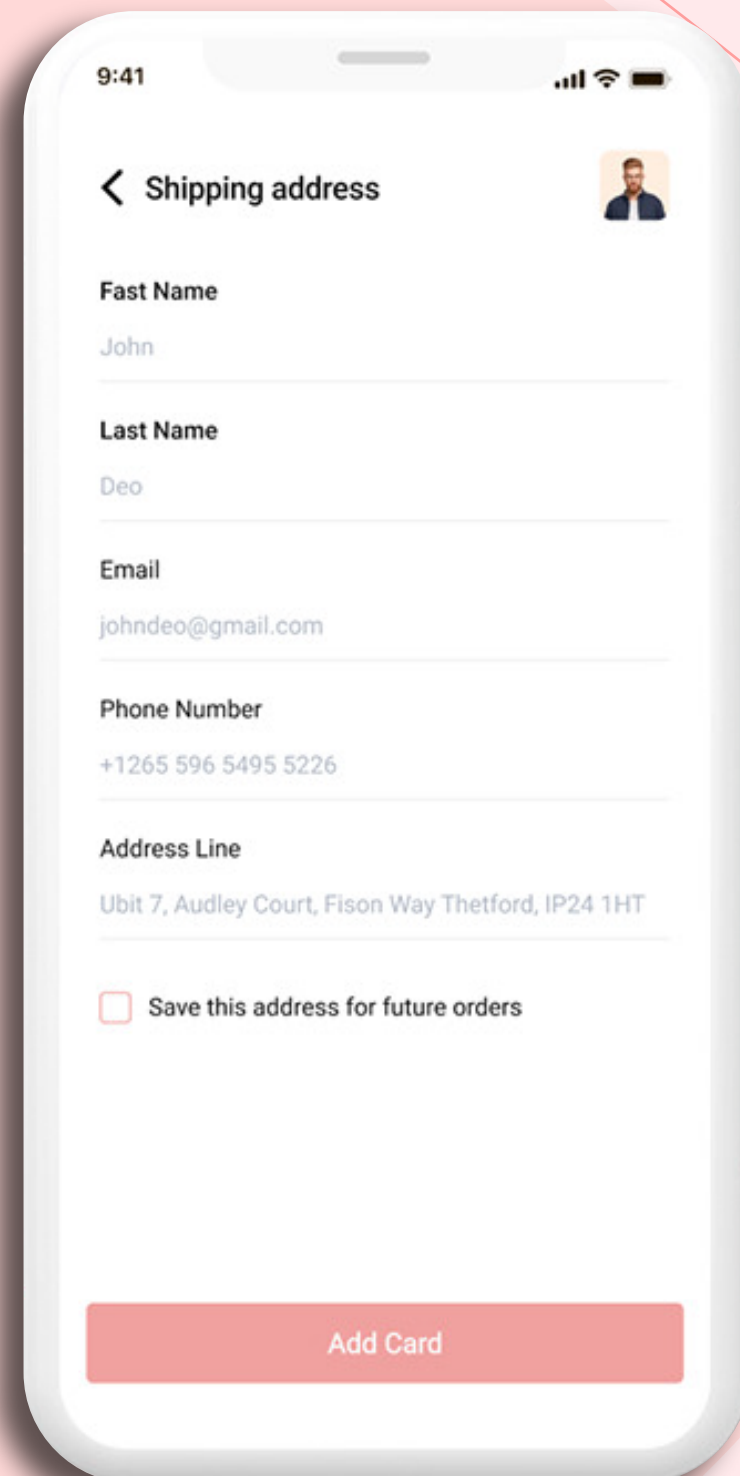

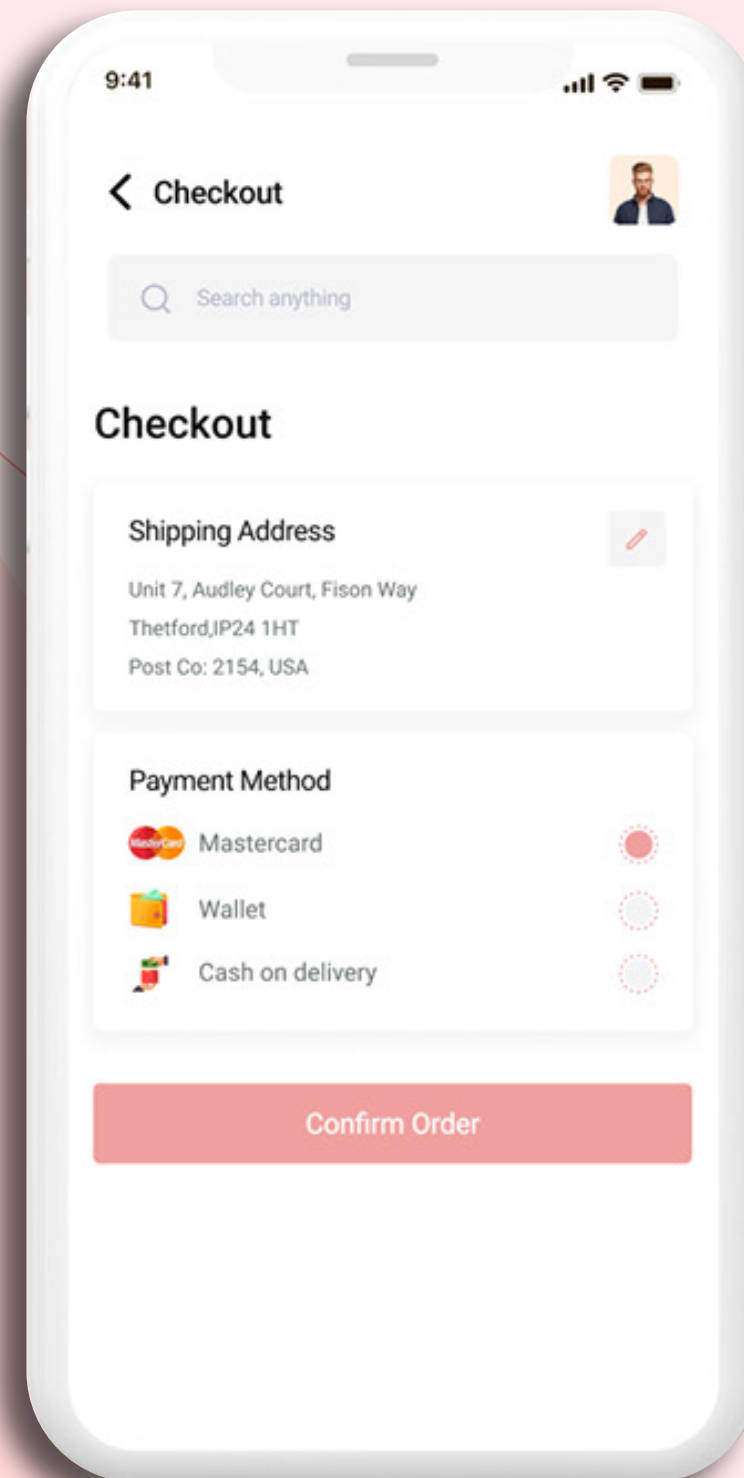

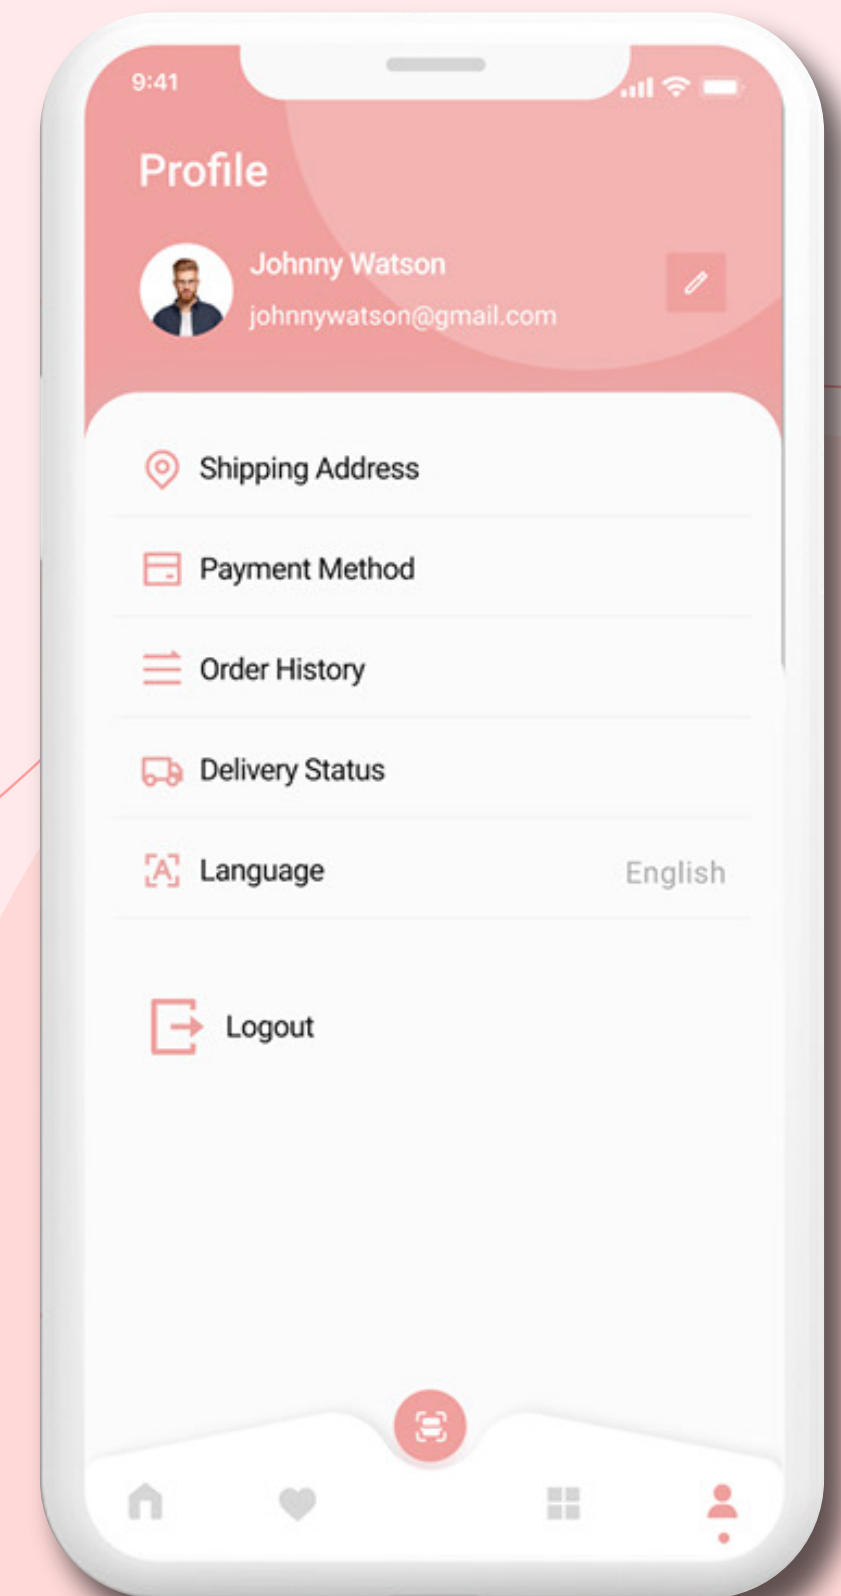

Category page

The category page displays products of the same or related category with a brief description of the product and its price.

Shipping Address

The e-commerce mobile app allows the user to store multiple shipping addresses and select one from the list or add a new address.

Profile

The customer can edit their profile details like payment information, saved cards, address and contact details.
